RANDOM SAMPLING AND ANALYSIS

According to ANSI/ASQC, 80 pieces out of total 837 pieces were selected at random for sampling. Then, 11 pieces out of total 80 pieces were selected at random for re-sampling according to Double Sampling plans. After sampling, total approx.101.6 grams of samples were obtained by chipping with a hard metal hammer. Then the samples were prepared into 4 sets with distributed as following:

- One set of sample (approx.25 grams) was sent to independent lab for required analysis.
- The left sample was retained at SGS GZ office for further reference if required.

Test results were released by the laboratory. The details as follows:

STUFFING INTO WOODEN BOXES

After sampling and weighing, 837 pieces of a/m cargo were stuffed into 31 wooden boxes under our supervision.

SEALING

Then the covers of the box were secured by nails and steel strip, and then sealed by SGS plastic/paper seals and adhesive tape. Finally we pasted SGS label onto each box facet, on which we marked seal NO., net weigh and inspection time.

The above reflects our findings at time and place of inspection only and does not refer to any other matters. It is not evidence of any shipments either.

The information stated in this report (or certificate) is derived from the results of inspection or testing procedures carried out in accordance with the instructions of our Client, and/or our assessment of such results on the basis of any technical standards, trade custom or practice, or other circumstances which should in our professional opinion be taken into account.
